Milan, 19th October 2005

OBJECT: IBIX Special Cleaning System with calcium carbonate – average granulometry: 80 micron

Following Your request, we confirm that we used your complete IBIX Special Cleaning System for the monumental restoration and structural consolidation of the bell tower of Monza's Cathedral and of the embankment road of Naviglio Grande River in Milan, and precisely for the cleaning of the façade elements and for the cortical adjustment of the new mortar which was used for the pointing of stone-lined walls.

We managed to obtain highly satisfactory results thanks to the fact that the System is not only greatly versatile but also very effective in terms of pressure and inert emission adjustment.

Both jobs, which were commissioned respectively by "Fabbrica del Duomo di Monza" and by the Municipality of Milan, under the high supervision of the Supervision of Cultural Heritage of Milan.

Best Regards

COSIPI sas
