OBJECT: IBIX Special Cleaning System with GMA Garnet Natural Mineral

By resorting to the complete IBIX Special Cleaning System, which is designed for the treatment and the restoration of surfaces, we restored historical prestigious monuments like the Trajan Museum and a few ancient pieces coming from the Imperial Fora in Rome.

The above-mentioned restoration operations of monumental sites were made possible thanks to the System's versatility and precision features, its extreme manoeuvrability and to unique pressure and inert emission adjustments. All these features become invaluable working tools in the hands of those in charge of the job.

Tecno Supply recommended the use of inert GMA Garnet natural mineral, to be teamed up with IBIX System. GMA Garnet's spherical particles reach the surface without damaging it and bringing about a full reconditioning.

Technical experts of the *Sovrintendenza* (Italian national authority for the supervision of the artistic and historical heritage), like Dott.ssa Lucrezia Ungaro, Dr. Massimo Vitti, Architect Annamaria Cusanno, Architect Marisa Fochetti, who were part of the technical staff of Chief Supervisor Prof. Eugenio La Rocca, gave their full approval to the use of GMA Garnet abrasive for the restoration of ancient and historical sites and pieces.

We are sending you this letter hoping it will be of service to you and we would also like to compliment you on the excellent technical results.
